

AI for Capella: Connect Capella to Your AI Ecosystem

THURSDAY, SEPT 24th, 2026

**Stéphane
LACRAMPE**
OBEO

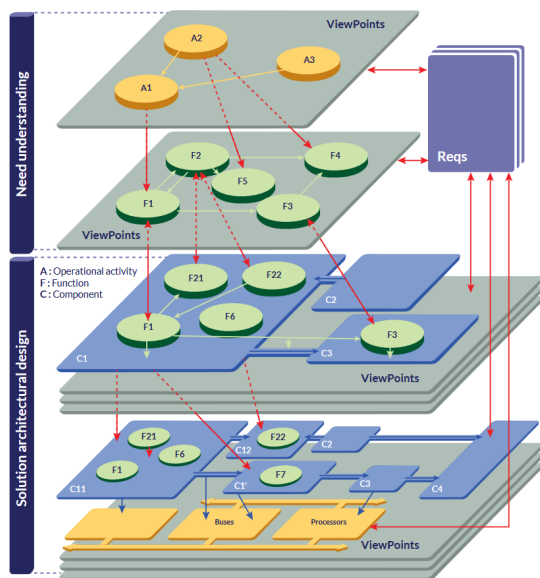

Stephane LACRAMPE
*Managing Director, North and
South America*
Obeo

Agenda

- **Why AI for Capella?**
- How it works
- What can AI actually do ? (See it in action)
- How to get started
- Q&A

Introducing Capella

Validating/Justifying solution against **Operational Need** Easing **Impact Analysis**

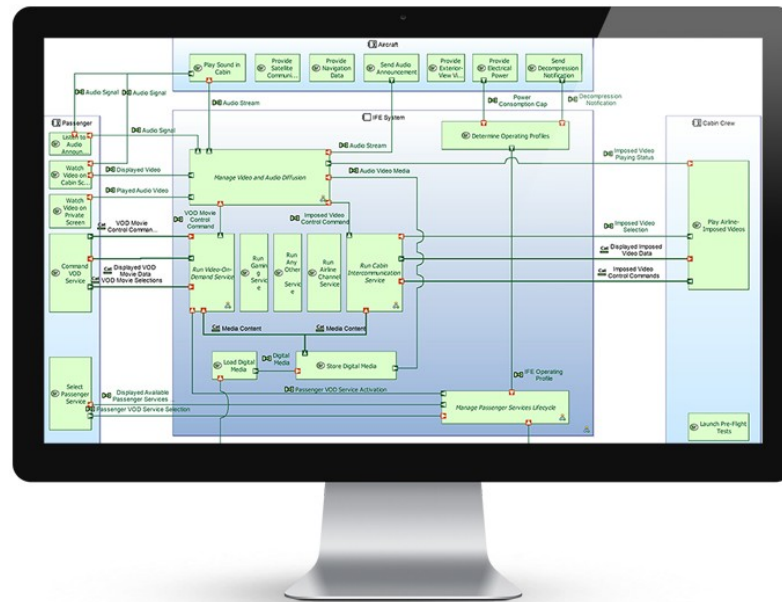

Operational Analysis
What the users of the system need to accomplish

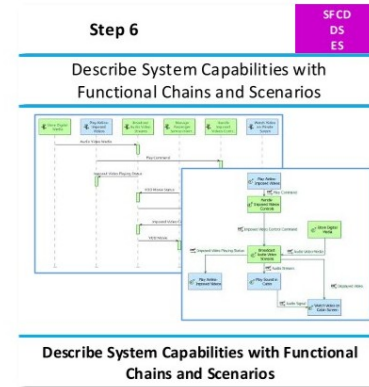

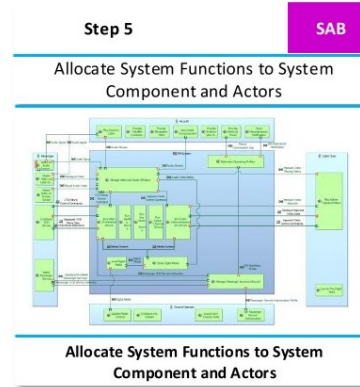

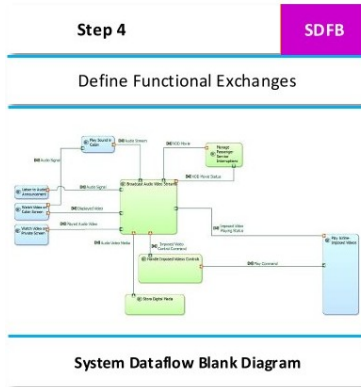

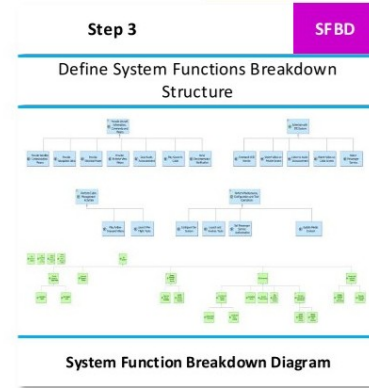

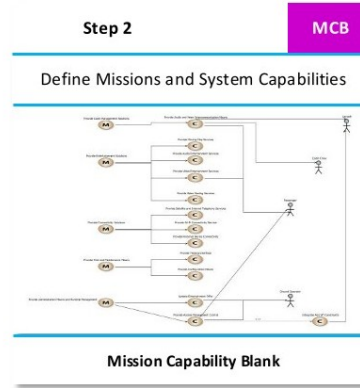

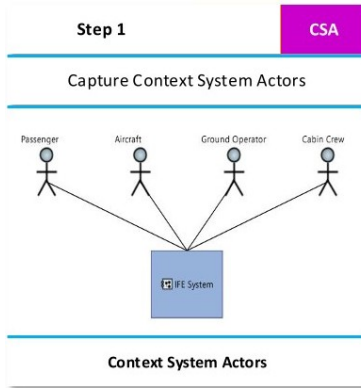

Functional & Non Functional Need
What the system has to accomplish for the users

Logical Architecture
How the system will work to fulfill expectations

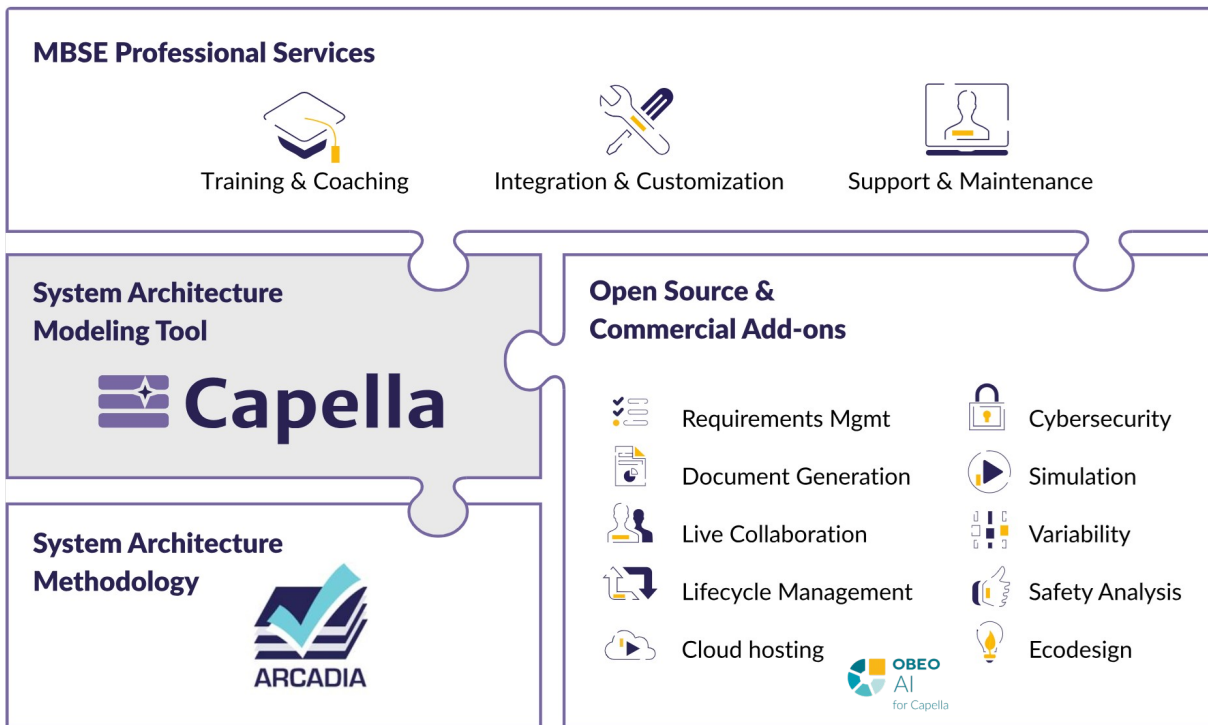

Physical Architecture
How the system will be developed and built

Arcadia/Capella Views

Capella ecosystem

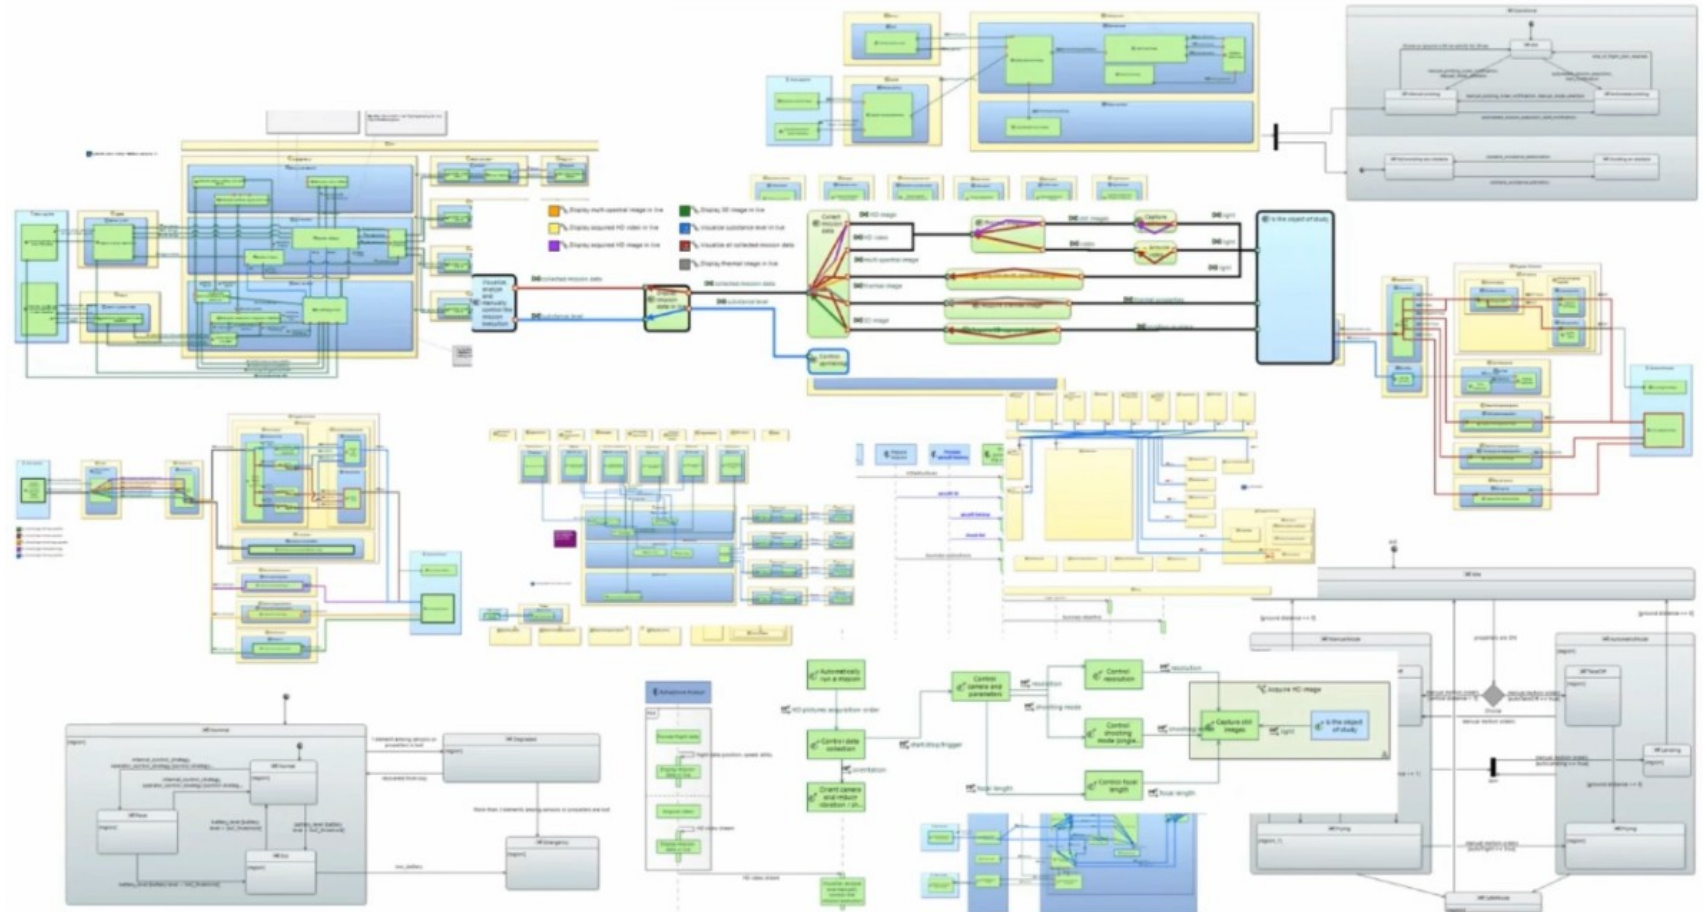

Capella, the modeling tool implementing the Arcadia methodology, is the cornerstone of a comprehensive MBSE ecosystem.

Why Arcadia & Capella Are a Strong Foundation for AI

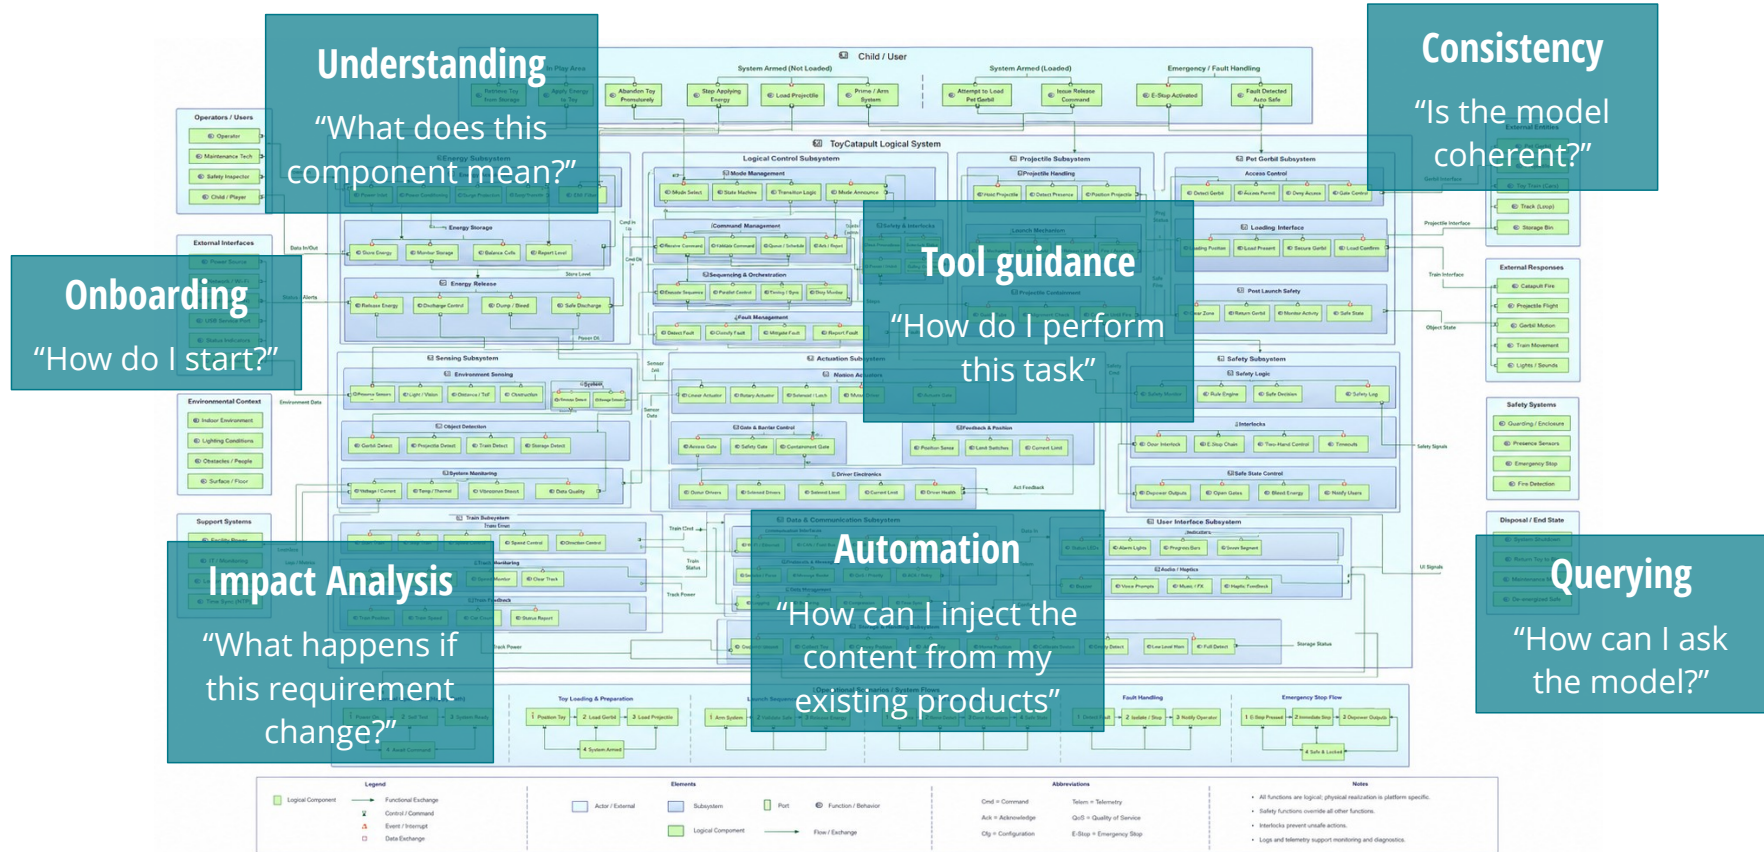

- **A structured method reduces ambiguity**
 - Defined perspectives, viewpoints and engineering steps give AI a constrained space to reason in.
- **Engineering semantics matter**
 - Capabilities, functions, exchanges and functional chains give AI meaningful engineering concepts to work with.
- **Explicit model relationships give agents structured context for impact analysis and navigation**
 - Functional chains and model relationships provide explicit links between engineering elements.
- **A consistent structure gives agents reusable patterns for navigating different models**
 - The same Arcadia structure applies across very different systems and domains

Your Capella model is an engineering asset

What Becomes Possible When AI Understands the Model

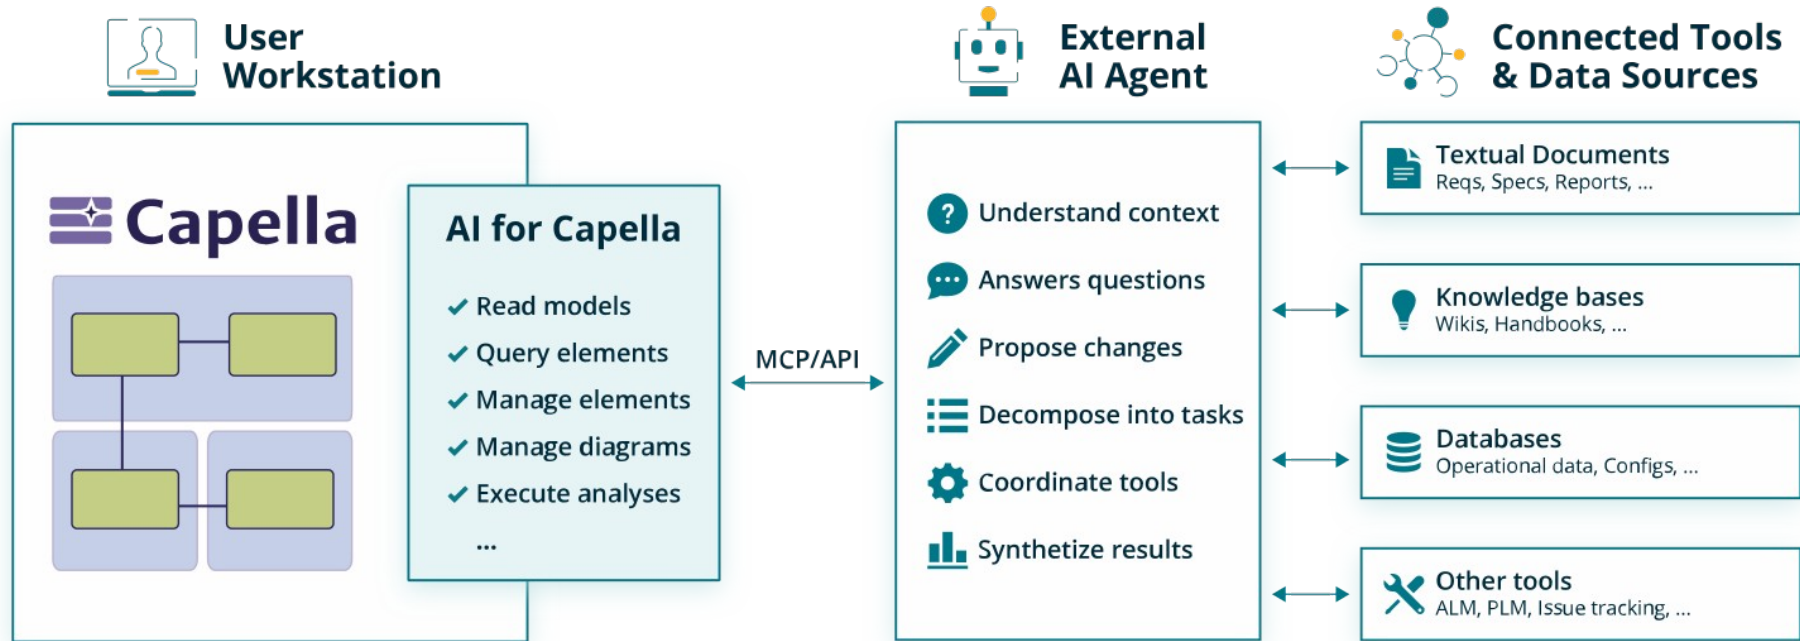

The value is not AI generating text around the model. The value is AI being able to work with the engineering knowledge contained in the model.

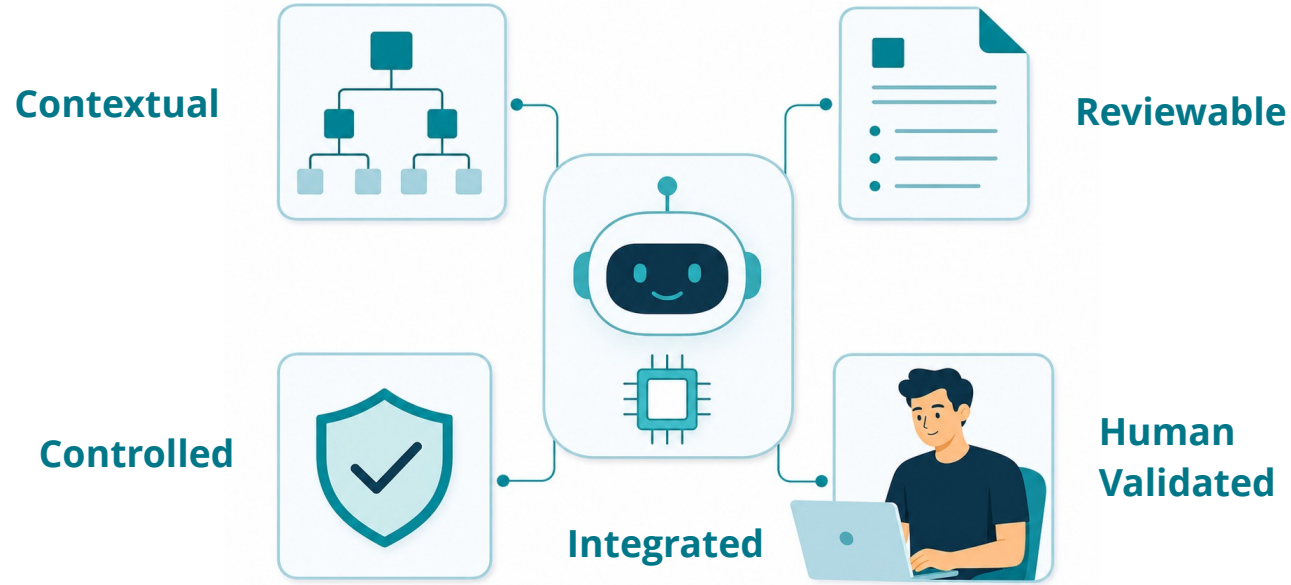

Agenda

- Why AI for Capella?
- **How it works**
- What can AI actually do ? (See it in action)
- How to get started
- Q&A

We Don't Want to Build Another AI Assistant

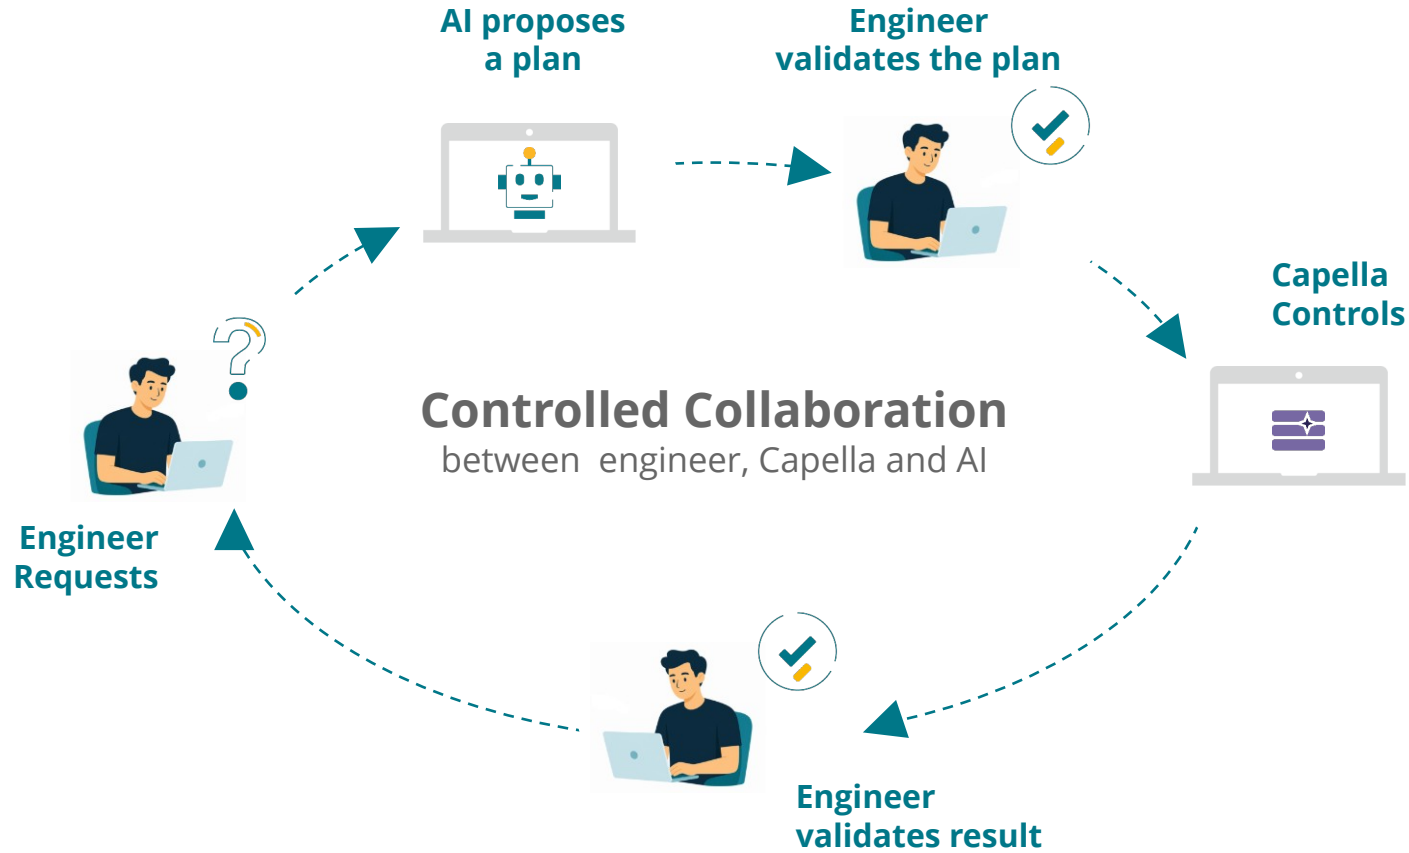

AI with rigor, traceability, and human responsibility

AI assists. Engineers decide.

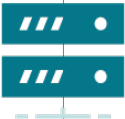

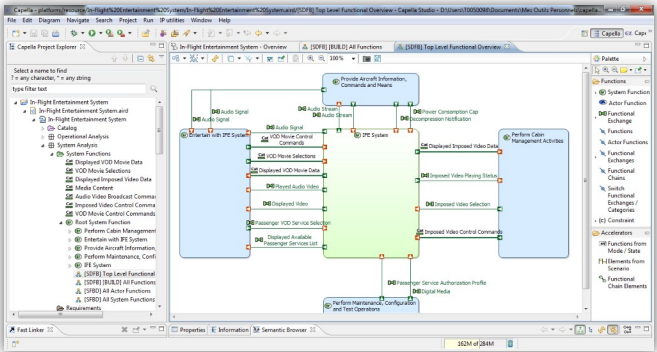

AI for Capella | Engineer/AI workflow

AI for Capella | Capella as an agent-ready platform

Capella Client

- Why AI for Capella?
- How it works
- **What can AI actually do ? (See it in action)**
- How to get started
- Q&A

AI for Capella | What AI Agents Can Actually Do with Capella

Discover

Find Capella projects, models, and diagrams available to AI agents.

Understand

Explore architectures, model elements, interfaces, dependencies, and engineering context.

Analyze

Evaluate impacts, identify dependencies, and assess architecture changes before implementation.

Edit

Create and update model elements, relationships, and diagrams through controlled AI-assisted operations.

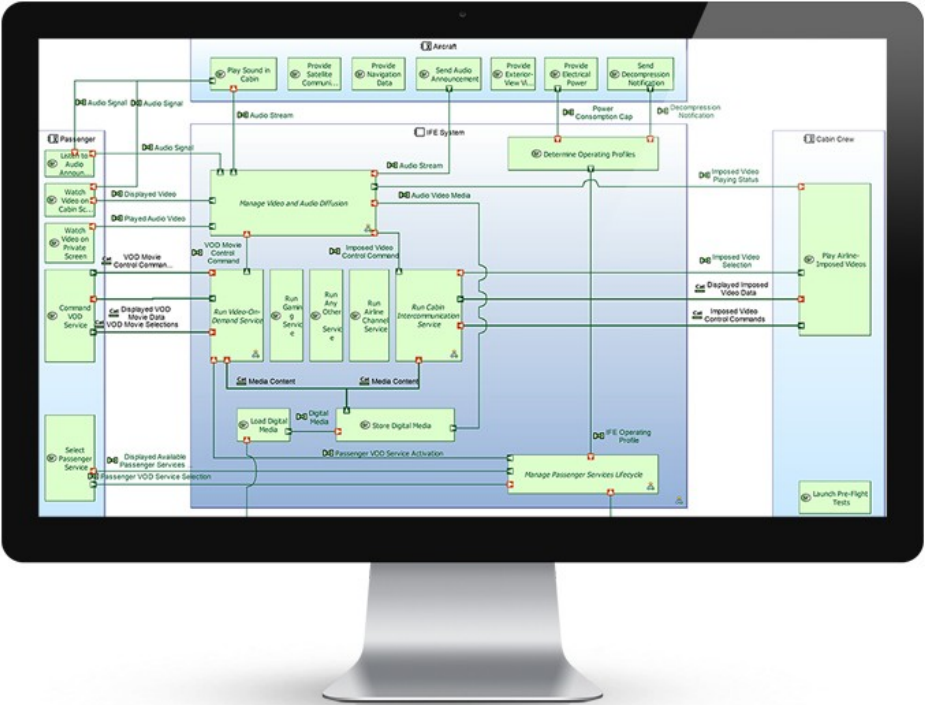

Document

Generate, enrich, and maintain model documentation while preserving traceability.

Review

Refresh, inspect, and export diagrams to support model review and validation.

AI for Capella | Demo

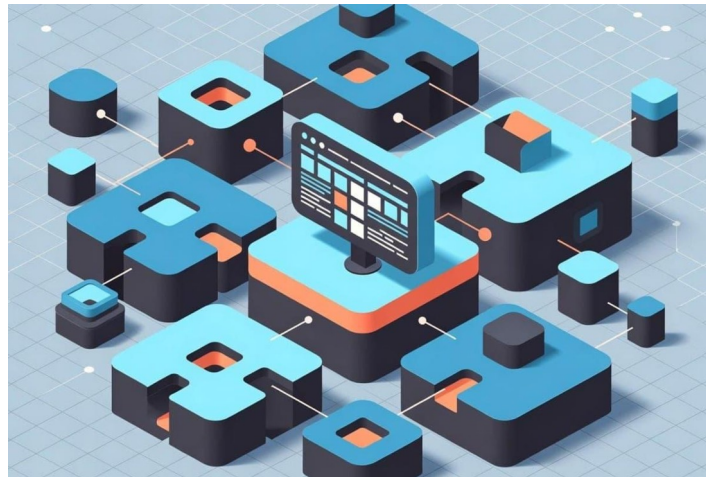

Agenda

- Why AI for Capella?
- How it works
- What can AI actually do ? (See it in action)
- **How to get started**
- Q&A

AI for Capella | Installation and compatibility

- **CAPELLA**
 - 7.1 , 7.0.1, 6.1, SMW
- **CONNECT**
 - Stdio, HTTP, HTTPS
- **CONTROL**
 - Read-only, Edit
- **YOUR AI ENVIRONMENT**
 - MCP-compatible clients: Claude, ChatGPT, Codex, Gemini, Antigravity...
- **Simple packaged installation • Java 21**

AI for Capella | From Model Access to Engineering Workflows

V 0.7.0	V0.7.1	2026.7	2026.9
Explore · Create · Edit	Semantic model access	Batch operations	Transitions · Guidance · Exploration

Continuous release cadence: aligned with Obeo products

Regular releases · Incremental capabilities · Continuous improvements

AI for Capella | What's planned for the 2026.11 release?

- **Stabilize:** MCP compliance with the latest spec · Reliability
- **Simplify:** easier install for non-technical users, a fuller list of what works today (with example prompts), short config videos
- **Expand:** MCP tools for Python for Capella scripts, diagram layer toggling, and layout (ELK)
- **Keep up:** Capella 2026.11 · New AI environments (Tencent WorkBuddy, DeepSeek ...)
- **And one more thing... Publication for Capella 2026.11 will bring AI directly into the browser:** Natural-language model querying · Explore and extract information — no Capella installation required

AI for Capella | Try it on your own models

- **Trial version**
 - 1 named access, full features
 - On-premises deployment (non-production)
 - 1 month, access to Obeo's support team

AI for Capella | AI changes the interface to engineering knowledge

Integrated

Seamlessly installation
in Arcadia/Capella

Your LLM, your Choice

Connect **your** LLMs and AI agents
through Capella MCP

Auditable

Human/AI interactions
and decisions logs

Controlled

Keep engineers in control through secure,
explicit, and traceable AI interactions.

Enterprise-ready

Deploy a supported and ready to use
for industrial MBSE.
